

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

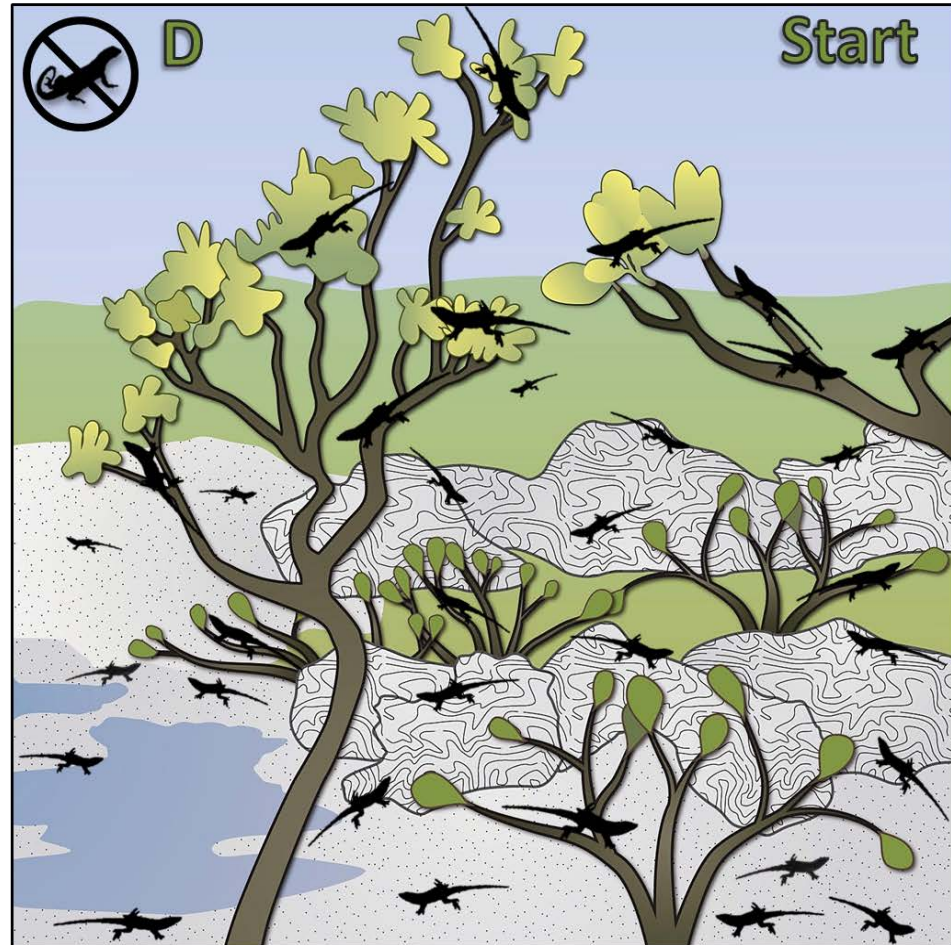

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

- a. Total number of lizards on the island:
- b. Number of lizards on the ground:
- c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).  
 → Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

- a. Total number of lizards on the island:
- b. Number of lizards on the ground:
- c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).  
 → Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:

2. Calculate the *proportion* of lizards on the ground. Divide the number of lizards on the ground (b) by the total number of lizards on the island (a).

→ Proportion of lizards on the ground:

1. How many lizards are on the island and where are they located? Write down your answers in the spaces below.

a. Total number of lizards on the island:

b. Number of lizards on the ground:

c. Number of lizards on branches, i.e. off the ground:
